EXPERIENCE

Wayfair

Software Engineer

Boston, MA

March 2025 – Present

- Shipped features end to end across checkout, cart, and browse pages serving 200M+ annual sessions, iterating quickly based on product and design feedback
- Ran A/B experiments on checkout loyalty enrollment modals, contributing to a +220% Membership Attach Rate lift projected to generate \$2.2M in annual GRS
- Drove migration of a high-traffic checkout page from a legacy monolith to a federated GraphQL and Java architecture
Related work ↗
- Decoupled CMS preview from checkout contract creation, cutting modal load time from 3.8s to 0.5s
Related work ↗
- Designed a server-side API integration within a day of a rate limit issue at major sale launch, preventing customer impact
- Configured Datadog dashboards, alerts, and synthetics to monitor checkout errors, payment failures, and page latency

Lacuna Mentors

Co-Founder and Software Engineer

December 2023 – May 2024

- Co-founded and led engineering from zero to one for a mentorship marketplace, growing to 60+ mentors and validating the concept through direct customer feedback
Related work ↗
- Owned product execution across onboarding, scheduling, and mentor discovery workflows, prioritizing high-leverage improvements from user conversations
- Built a custom scheduling system, saving the business \$900/month in costs

Hariri Software & Application Innovation Lab

Software Engineer

May 2021 – August 2023

- Worked directly with university researchers to manage the full product lifecycle for a suite of full-stack applications — from requirements gathering and rapid iteration based on weekly demos to final deployment
- Selected as one of only two students to receive the 2023 Hariri Student Excellence Award for exceptional skill, strong work ethic, and commitment to excellence

PROJECTS

Julius AI (YC W22)

Julius Sheets

- Built an excel editor inside Julius AI's Data Explorer, enabling users to open, edit, and save .xlsx files directly within the product
- Integrated SpreadJS for in-browser sheet rendering with backend changes to persist edits to the user's spreadsheet
- Streamed agent-generated cell operations into the spreadsheet in real time as Julius AI planned and executed steps
- Shipped to dev environment behind a feature flag within three days

Pi-cc

github.com/chrischo360/pi-cc

- Built an open-source extension for pi, an agent harness, that detects fenced code blocks and presents a numbered picker to copy them cleanly
