WORK EXPERIENCE

Wayfair, Boston, MA

March 2025 – Present

Software Engineer

- Optimized checkout loyalty enrollment through A/B experimentation, **increasing Membership Attach Rate by 220% and contributing to projected \$2.2M annual GRS.**
- Decoupled CMS preview from checkout contract creation, **cutting load time by 86% from 3.8s to 0.5s** (case study here: <https://www.christopher-cho.dev/work/rewards-modal-preloading>)
- Engineered end-to-end checkout, cart, and browse features serving 200M+ annual sessions, accelerating feature delivery through rapid cross-functional iteration.
- Migrated high-traffic checkout functionality from a legacy monolith to federated GraphQL and Java architecture, improving scalability, maintainability, and service modularity.

Lacuna Mentors, Boston, MA

December 2023 – May 2024

Co-Founder & Software Engineer

- Co-founded and led engineering for a zero-to-one mentorship marketplace, **scaling the platform to support 60+ mentors** through iterative software development.
- Engineered a custom scheduling system, eliminating third-party dependencies and **reducing operational software costs, saving ~\$1000 per month.**
- Developed and optimized onboarding, scheduling, and mentor discovery workflows, translating customer feedback into scalable, high-impact product and engineering improvements.

Hariri Software & Application Innovation Lab, Boston, MA

May 2021 – August 2023

Software Engineer

- Engineered and delivered multiple full-stack applications for university researchers, **managing 100% of the development lifecycle** from requirements gathering through production deployment.
- Accelerated development cycles through weekly stakeholder demos and iterative feedback, enabling continuous feature refinement and reducing requirements-to-deployment turnaround.
- Collaborated directly with university researchers to translate complex requirements into production-ready applications, earning the 2023 Hariri Student Excellence Award for engineering excellence.

PROJECT EXPERIENCE

Julius AI - Julius Sheets (YC W22)

- Engineered an in-product Excel editor using SpreadJS, enabling in-browser opening, editing, and saving of .xlsx files within Data Explorer.
- Integrated frontend spreadsheet rendering with backend persistence, enabling real-time streaming of agent-generated cell operations during AI-planned execution.
- Delivered the end-to-end spreadsheet editing feature to the development environment behind a feature flag within three days, enabling controlled testing and deployment.

TECHNICAL SKILLS

Languages & Tools: Python, Java, C++, SQL, Git, Linux, VS Code, HTML, CSS, JavaScript, TypeScript, Go, Rust, Bash, JSON, YAML, GraphQL, Postman

Frameworks & Libraries: React, Node.js, Flask, FastAPI, Django, Express, Spring Boot, Next.js, Redux, Tailwind CSS, Angular, Vue.js, JUnit, PyTest, Jest, Cypress, Selenium, gRPC

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, Firebase, DynamoDB, Cassandra, SQLite, Elasticsearch

Cloud & DevOps: AWS, GCP, Azure, Docker, Kubernetes, Terraform, CI/CD, Jenkins, ArgoCD, Helm, Prometheus

Systems & Architecture: Microservices, REST/GraphQL APIs, WebSockets, Kafka, RabbitMQ

EDUCATION

Boston University, Boston, Massachusetts

Bachelor of Arts in Computer Science

May 2024
